

FOGGING OIL

Spray lubricant for engine protection during storage

Aerosol

TYPE OF USE

MOTUL FOGGING OIL protects the internal engine parts from rust and corrosion when the engine is stored.

Extends the life of the engine and reduces its maintenance.

Suitable for all vehicles that have to be stored several months until the next season such as marine engines, cars, motorcycles, ATVs, snowmobiles, lawn movers, chain saws...

Compatible for any 2 Stroke and 4 Stroke engines operated seasonally or infrequently, then stored for a long period of time.

PERFORMANCE

During storage, ambient temperature variations create condensation inside the engine leading to corrosion and acid attacks on metallic parts. Long storage periods can also dry out cylinders. MOTUL FOGGING OIL leaves a thick, long lasting lubricating and anti-corrosive oil film in order to provide long term protection against corrosion and dry starts.

RECOMMENDATIONS

Always check equipment owner's manual for application directions.

Shake before use.

For Gasoline engines:

- Start the engine and spray the product directly into the air intake system or into the carburetor until the engine stalls.
- Remove the spark plugs and spray the product into each spark plug hole.
- Replace the spark plugs and store the vehicle.

For Diesel engines:

- Refer to the owner's manual for application directions.

SECURITY

Refer to the MSDS sheet and the information mentioned on the aerosol.
